Software Engineer | Application Support

Experienced software engineer with 3+ years of designing, deploying and maintaining robust software solutions. Strong problem solving skills with a detailed-oriented approach to deliver high-quality code and optimum performing software.

Expert in agile methodologies, managing teams with a high level understanding of the projects.

Effective communication and networking skills dedicated to working with any team to deliver the best of my abilities.

TECHNICAL PROFICIENCIES

Soft Skills: Agile Methodology | Project Management | Product Management | Technical Documentation | User Training | Process-flow Re-engineering

Hard Skills: Software Engineering | Technical & Functional Requirements | Network Administration | Database Management | Application & User Support | Website Design & Management

Programming Languages: C# | Python | Java | JavaScript | PHP | HTML | CSS | Dart

Frameworks & Tools: .NET | Laravel | React | Node.js | Github | Figma | Flutter | Flutterflow

PROFESSIONAL EXPERIENCE

Software Engineering consultant (2024-)

Agent Banking Company, Kampala, Uganda

- Currently developing a loans and savings module for the platform allowing quick access to savings and loans services to the company's bank agents across the country.

Software Engineer & Application Support developer (2022-2024)

Pegasus Technologies Limited, Kampala, Uganda

- Cut 100% costs to banks to provide UMEME to clients by integrating directly to UMEME and being 100% efficient as we no longer relied on the uptime of the banks but rather the service provider.
- Onboarded and integrated Makerere Parking to allow mobile money payments increasing the revenue collected at the university. This included developing the Parking portal and creating a USSD shortcode
- Developed the mobile money payment used at the airport by UCAA reducing the payment time used by the travelers at the airports.
- Integrated into URA and NSSF improving the services provided to our partners increasing the revenue and volume of traffic received.
- Re-wrote the Ministry of Water and Environment (MOWE) Portal code reducing its downtime by 98% allowing all stakeholders to adequately perform their given tasks
- Developed background services to automatically reconcile transactions performed the previous day. This subsequently reduced the tasks performed by the finance team by 70% in a day.
- Improved the loan processing and acquisition time of MTN Extra float by 80%. This was done by rewriting some of the stored procedures that were slowing down the process
- Reduced the number of complaints from new MTN customers by 100% who had been assigned new numbers that had loans from old customers. This involved recycling the numbers and loans attached to these numbers before being assigned to new numbers (MTN Extra float and MTN Devices - Kabode)

Application Developer - Team Lead(2021)

Billbrain Institute of Technology, Kampala, Uganda

- Managed and led the development of a student management system using Laravel and PHP while interacting with the stakeholders about the requirements
- Strengthened project management skills and technical skills through requirements analysis and system design.

- Refined network connectivity, access to shared resources and trimmed network connectivity challenges 70% by revamping the network infrastructure at City Hall, KCCA as a part of a cross-functional IT team.
- Eliminated manual processes and grew service delivery at City Hall 70% by authoring project documentation for the KCCA ECitie system enhancements.

EDUCATION

Bachelor of Science in Software Engineering, Makerere University, Uganda (2022) (*First Class Honors*)

PROJECTS UNDERTAKEN**Government Projects**

- **Ministry of Water & Environment E-Billing System for Umbrella Water Authorities**

Was part of the team at Pegasus Technologies that supported and enhanced the E-Billing System used by the Umbrella Water Authorities across the country.

This system enables the Umbrella Water Authorities to capture readings and carry out billing of their customers. This system also enables them to collect mobile money and bank payments from the customers. I also led the team that carried out the User Acceptance Tests for the various enhancements as requested by the Ministry to ensure that what was developed complied with the requirements for the enhancements as provided by the Ministry. I also conducted training sessions on the enhancements for the users at the various Umbrella Water Authorities.

Commercial Projects

- **Payments Aggregation Services for Multichoice Uganda**

Was a member of the Pegasus Technologies team that launched the USSD short code payments aggregation services for Multichoice Uganda. The goal of this project was to make it possible for Multichoice users to pay for DStv and GOtv using a USSD short code.

In order to make sure that the software produced and deployed corresponded with the specifications provided by Multichoice Uganda, I oversaw the team that performed the User Acceptance Tests.

- **DStv and GOtv Payments Aggregation Services for DFCU Bank**

Was a member of the Pegasus Technologies team that launched the DStv and GOtv payments aggregation systems for DFCU Bank. The goal of this project was to make it possible for DFCU Bank clients to pay for DStv and GOtv services.

In order to make sure that the software built and deployed corresponded with the specifications provided by DFCU Bank, I also headed the team that performed the User Acceptance Tests.

- **Rent Collection and Property Management Platform**

Supervised the Pegasus Technologies team that created and implemented the Rent Collection and Property Management system. With the use of this platform, landlords can obtain payments from their tenants using bank and mobile money channels.

To make sure the content created complied with the requirements, I ran user acceptance tests in addition to requirements collecting, scoping, and analysis.

- **Mobile Money Aggregation Services for Makerere University Parking**

Was part of the Pegasus Technologies team that supported and improved the collection of parking fees in Makerere

University through USSD and portal (QR Code).

I supported through the development, User Acceptance tests, system integration tests and the go live of the product.

Was a member of the Pegasus Technologies team that supported and improved the Bulk SMS Aggregation and Mobile

▪ **Bill Payments Aggregation Services for Third-Party Vendors**

Was a member of the Pegasus Technologies team that launched bill payment aggregation systems for multiple vendors, including Wave, WayaMoney, Vortex, and others. These initiatives were designed to make it possible for the clients of these third-party suppliers to pay their bills for services like UMEME, NWSC, DStv, and GOtv through them.

In order to make sure that the software built and delivered met the specifications provided by different vendors, I also led the team that performed the User Acceptance Tests.

▪ **Mobile Money Aggregation Services for Third-Party Vendors**

Was a member of the Pegasus Technologies team that launched mobile money payments aggregation services for various vendors, including Wave, WayaMoney, Kommute, and others. These initiatives attempted to make it possible for customers of these third-party sellers to pay the vendors with mobile money.

In order to make sure that the software built and delivered met the specifications provided by different vendors, I also led the team that performed the User Acceptance Tests.
